

RF Motors User Interface Testing

Guidance:

Placeholders are included in the login and register form to ensure users enter the correction information when creating or logging in to an existing account.

The image displays two screenshots of a web application interface for RF Motors Car Rental. The top screenshot shows the Login page, and the bottom screenshot shows the Register page. Both pages have a dark theme and a navigation bar with links to Home, About Us, Login, Register, and Contact. The Login form includes fields for Email and Password, a Login button, and a link to Register here. The Register form includes fields for Name (Full Name), Email, Phone Number, and Password, a Register button, and a link to Login here. The footer of the Register page states: © 2025 RF Motors Car Rental. All rights reserved.

Feedback:

When renting a car the user receives a confirmation page, giving them feedback that the purchase has been made.

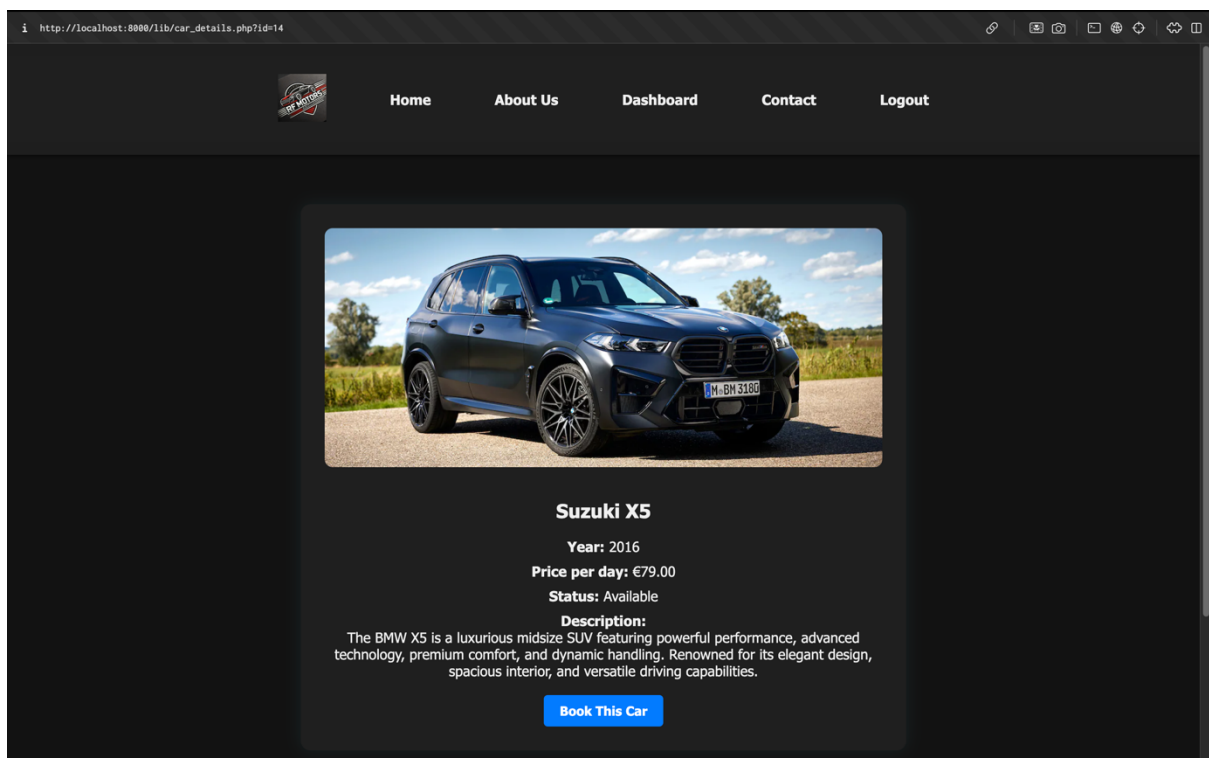

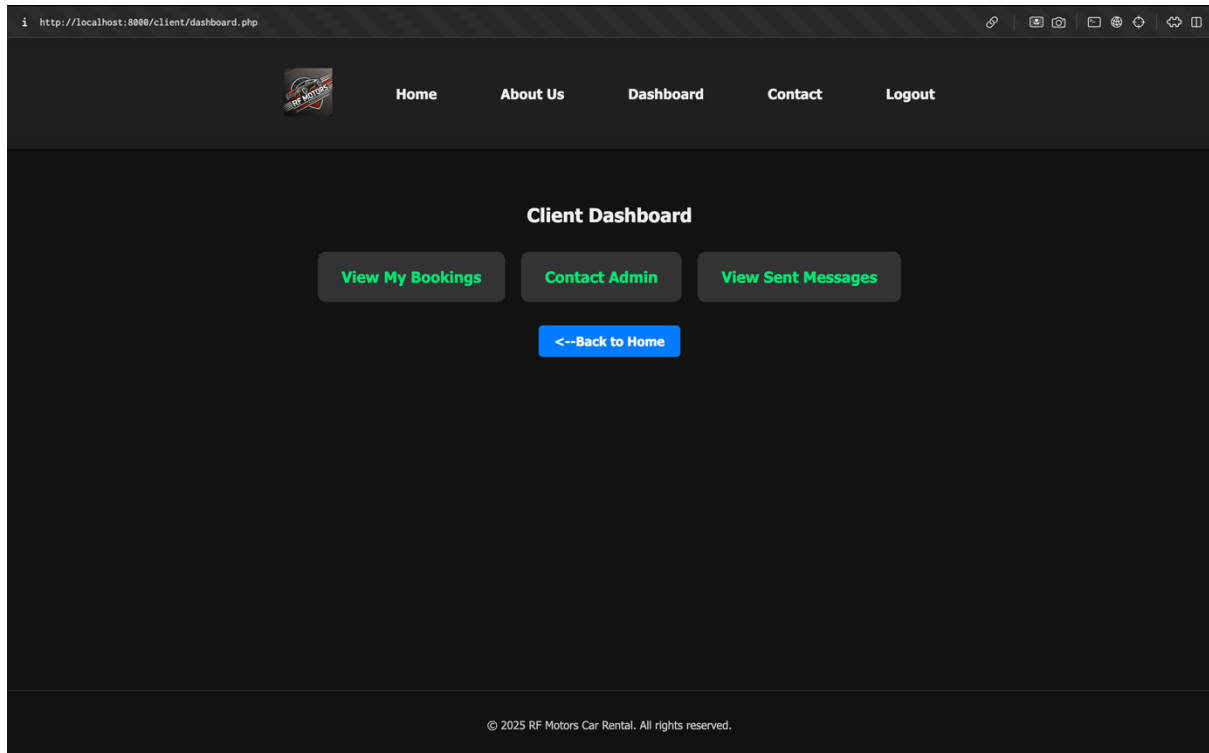

Recoverability:

The user can easily cancel their bookings before the start date, allowing room for error or a change in circumstances.

Consistency:

The nav bar has a consistent layout across all pages to ensure users can easily navigate throughout the website.

Minimal Clicks:

A search feature for cars is provided to allows users to quickly find what they are looking for, without the need of endless scrolling.
